

Resuscitation and Anesthesia Facemasks

EFFECTIVE AND ECONOMICAL

With a wide choice in style, material and size, O-Two provides a comprehensive range of resuscitation and anesthesia facemasks to meet any respiratory requirement.

From the truly “one-size-fits-all” Universal Facemask (available in both PVC and silicone) to the disposable, inflated-cuff range for child to adults, the high quality and superior design of these masks makes them the perfect choice for both hospital and pre-hospital use.

The silicone range flanged design of the O-Two Universal Range, are ideal anesthesia masks as they withstand repeated autoclaving. The three sizes of clear PVC Everseal masks are ideal for pre-hospital use.

The disposable, inflated cuff range, meets the user's needs. These masks come with clear plastic bodies and soft sealing cushions, which reduce the chance of cuff failure. The inflation pressure of the cuff is calculated to provide a superior seal when hand pressure is applied to the mask. Our single-use cuffed masks are provided with a head harness hook ring. All masks have standard 22 mm inlet connectors and come conveniently packaged in cases of 12
